**xProTFT monitors** –  
the perfect displays for automobile  
test scenarios

## xProTFT monitors – superior through performance and the highest precision

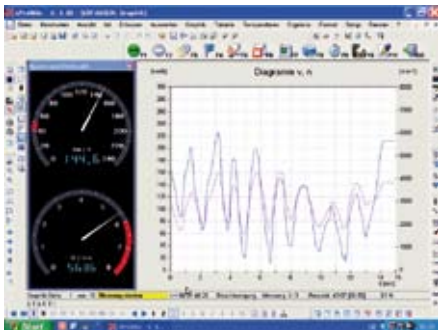

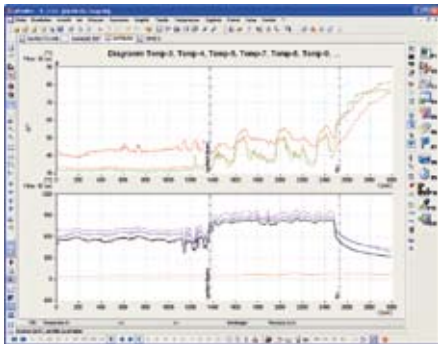

Suchy Data System's premium LCD monitors are the ideal addition to our advanced Suchy measurement systems. So functional, so robust, so light, so clear: an attractive eye-catcher – the ultimate show. By relying on our innovative and durable xProTFT monitors for your automobile test runs, you will open completely new dimensions for your testing, measurement procedures and control tasks – both regarding optics and efficiency. You can look forward to a crystal-clear, perfectly focused and extremely contrasted processing and presentation of your test results. Monitor on – for a new level in fascination!

Compact, light-weight and with top-quality internal components: a Suchy LCD will optimize your tests long term.

## Sovereign masters of ceremonies for testing, measuring and verification of automobiles

What makes Suchy Data Systems' LCD monitors so special? Quite simply: they were developed especially for use in automobile testing procedures. For this reason, they are packed with outstanding visual features and a large amount of technological cleverness.

However, that is not enough. The specialized and durable LCDs from Suchy can do much more:

- due to transreflective technology, depending on the model, they use day and sunlight to illuminate the display
- their designer casing is made of aluminum and is not only durable but also light as a feather
- rounded corners prevent injury in case of accidents
- an anti-reflection, protective surface guards the LCD screen against dirt, dust, sand and mechanical damage
- special thermal construction and low power consumption minimizes internal device heat build up. Therefore, they can even be used under extreme heat conditions: up to 60° C without a fan!
- installation in seconds with massive suction cups and rapid placement with bayonet seals and single-hand locking: Suchy LCDs can be installed effortlessly!

## They also excel in their optical performance

Extended perspective, sharp contrast, glowing brightness: these are but three qualities with which our LCDs pamper their users. Your advantage: measurement values and visualization are seen precisely, even in the sunshine and brightest daylight.

Additional convincing features:

- model with a 6.5" diagonal screen size – the mini, ideal for small test vehicles
- model with a 10.4" diagonal screen size, for standard applications
- two resolutions are available: 640 × 480/1.024 × 768 pixel
- comfortable on-screen menu for a easy adjustment of contrasts and picture position
- standard input current range: 9–18 VDC, optionally available with 9–36 VDC
- standard VGA connection with 5 pole SubD jacks
- power supply via high-quality Lemos plugs

## Suchy Data Systems – Experts in Measurement Technology

When you require technology-intensive solutions for measurement-related hardware and software, we are your dependable partner. We have specialized in highly individual concepts in this area for over 20 years. Alongside innovation, creativity, measurement precision and flexibility, we have made the values of fairness and openness our guiding principles. Numerous renowned companies have relied on us for years and have profited from our excellent hardware and software products: for the maximum efficiency, outstanding quality and the easiest application.

**Suchy Data Systems – first-class measurement technology, which you can measure us against anytime.**
